

83313 - Invasive Alien Species Observatory and Network Development for the Assessment of Climate Change Impacts and Contextual Ecosystem Services Evaluation in Black Sea Deltaic Protected Areas

The Black Sea bioregion faces pressure from non-native species, maritime transport, climate change, and economic development. The project aims to address the impact of Invasive Alien Species (IAS) on Ecosystem Services (ES) by enhancing the management and mitigation of IAS, reducing its spread, improving ecosystem resilience, and ensuring sustainable ES provision in the deltaic regions.
